

NORTH SQUARE

Tactical Growth Fund

TICKER Class A: ETFAX | Class C: ETFCX | Class I: ETFOX

AS OF MARCH 31, 2022

A SHARPE RATIO STRATEGY

SUMMARY	KEY FEATURES	INVESTMENT OBJECTIVE
North Square Tactical Growth Fund is an allocation strategy seeking growth on a risk-adjusted basis.	Outcome oriented, not benchmark focused. Broadly diversified with access to all sectors and asset classes. A track record that dates to 2004.	Seek long-term capital appreciation.

MORNINGSTAR RATINGS & RANKINGS

Overall ¹	★★★★★	1 st Percentile
1 Year ²		26 th Percentile
3 Year	★★★★★	25 th Percentile
5 Year	★★★★★	21 st Percentile
10 Year	★★★★★	10 th Percentile

Morningstar rated the North Square Tactical Growth Fund, Class I among 240, 240, 208 and 111 Tactical Allocation funds for the overall rating and the 3-, 5-, and 10-year periods (as applicable) ending 3/31/22, respectively. Morningstar Ratings™ are based on risk-adjusted returns. The Overall Morningstar Rating™ is derived from a weighted average of the performance figures associated with a fund's 3-, 5-, and 10-year (if applicable) Morningstar Rating™ metrics.

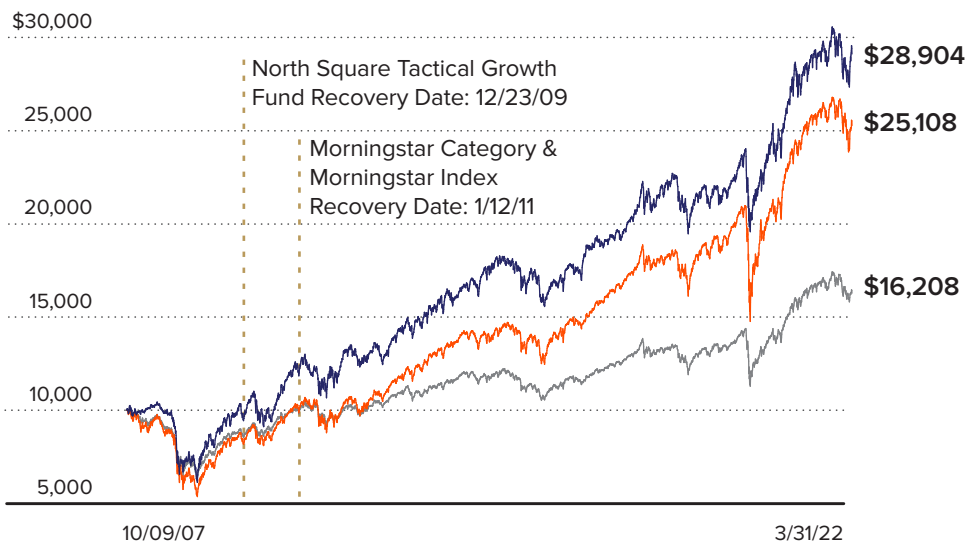

Morningstar rankings are based on total return.

1 The Overall Percentile Performance ranking represents the Fund's performance from inception to date (5/3/04–3/31/22) against 69 Tactical Allocation funds.

2 The Fund's 1 Year Percentile Performance ranking represents the Fund's performance (3/31/21–3/31/22) against 269 Tactical Allocation funds.

FULL MARKET CYCLES ILLUSTRATE INVESTMENT RESULTS OVER TIME. GROWTH OF \$10,000, FROM THE LAST PEAK 10/9/07 – 3/31/22

The North Square Tactical Growth Fund losses from the 2007-2009 global financial crisis were recovered by 12/23/09. In comparison, the Morningstar Moderately Aggressive Target Risk Index and the Morningstar category did not fully recover until 1/12/11.

A RISK-ADJUSTED APPROACH TO SECURITY SELECTION:

1. RESEARCH

Sharpe ratio research is conducted daily on almost 2,000 ETFs.

Sharpe ratio, developed by Nobel Laureate William F. Sharpe, has become an industry standard for calculating risk-adjusted return of a portfolio.

2. ANALYSIS

Sharpe ratio is a tool to compare risk and return characteristics of different types of ETFs. We seek to identify ETFs with persistently high or growing Sharpe ratios

3. SELECTION

As market conditions and Sharpe ratios change, the fund can reduce or increase equity exposure. A diversified portfolio of 8-15 ETFs is constructed, taking into account market volatility and return potential.

Max Qtr-End U.S. Equity Allocation September 2011
 Domestic Equity ETFs: 97%
 Non-Correlated Allocation: 3%
 International Equity ETFs: 0%

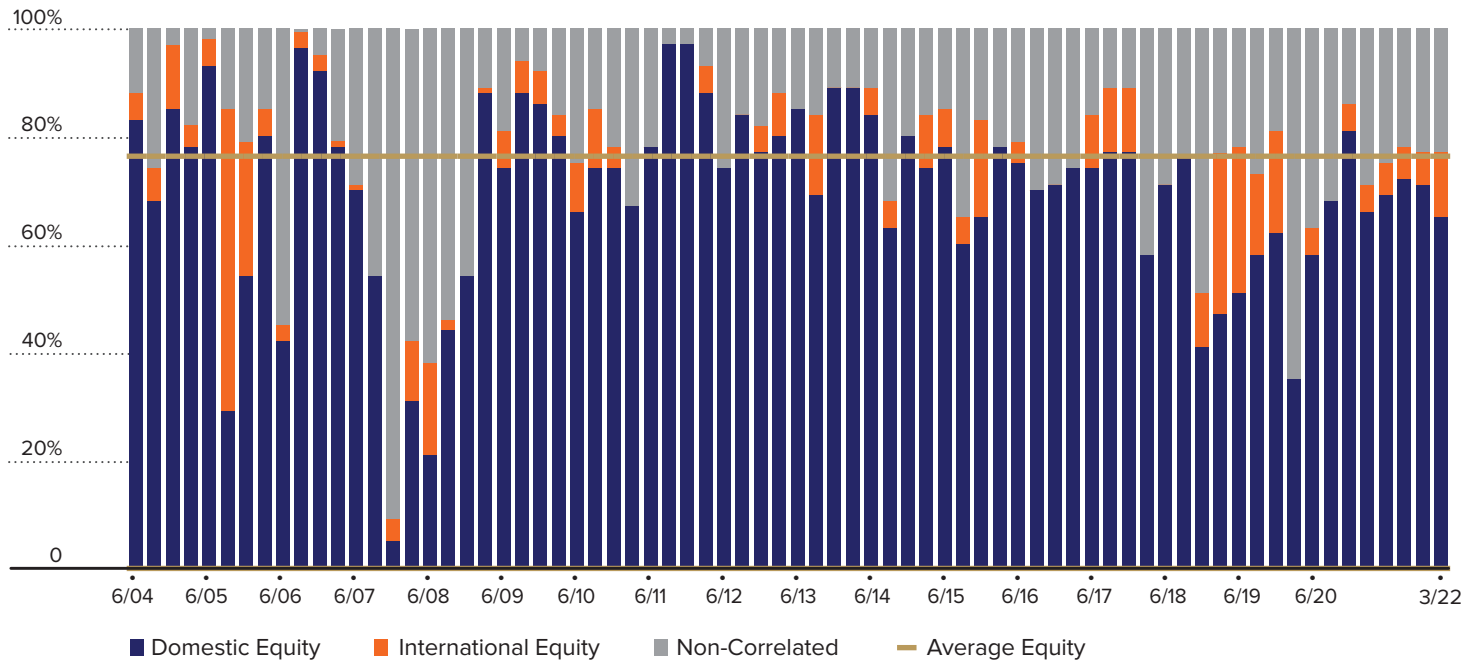

Max Qtr-End Non-Correlated Allocation December 2007
 Domestic Equity ETFs: 4.5%
 Non-Correlated Allocation: 92%
 Int'l Equity ETFs: 3.6%

$$\text{Sharpe Ratio} = \frac{\text{Avg. Return} - \text{Risk Free Rate}}{\text{Standard Deviation (also known as historical volatility)}}$$

FUND QUARTERLY ALLOCATION

North Square's Tactical Growth Fund shifts between domestic equity ETFs, international equity ETFs, and a non-correlated allocation based on our proprietary Sharpe ratio analysis.

The Fund's investment adviser has contractually agreed to waive its fees and/or pay for or reimburse operating expenses of the Fund to ensure that total annual fund operating expenses (excluding any taxes, leverage interest, brokerage commissions, dividend and interest expenses on short sales, any acquired fund fees and expenses, expenses incurred in connection with any merger or reorganization, extraordinary expenses such as litigation expenses, and payments, if any, under a Rule 12b-1 Distribution Plan) do not exceed 1.30%, and 1.30% of the average daily net assets of the Fund's Class A, and Class I shares, respectively until September 30, 2022. The Expense Limitation Agreement may be terminated before that date only by the Board of Trustees. The Advisor is permitted to seek reimbursement from the Fund, for three years from the date of any such waiver or payment to the extent a class's total annual fund operating expenses do not exceed the limits described above.

The Statistics presented are defined as follows: **Beta** is a measure of systematic risk, or the sensitivity of a manager to movements in the benchmark. A beta of 1 implies that you can expect the movement of a manager's return series to match that of the benchmark used to measure beta. **Maximum Draw-down** measures the largest percentage decline from a peak to a trough. **Downside Risk** estimates the potential loss in value of a security if market conditions precipitate a decline in that security's price. **Standard Deviation** measures the average deviations of a return series from its mean, and is often used as a measure of risk. The **Sharpe ratio** measures the excess return per unit of deviation, or risk. **Correlation** is a measure of how investments move in relation to one another. A correlation of 1 means the two asset classes move exactly in line with each other, while a correlation of -1 means they move in the exact opposite direction. A correlation of zero means that the returns are completely uncorrelated, or a "non-correlated" asset.

Principal Risks of Investing: Risk is inherent in all investing including an investment in the Fund. An investment in the Fund involves risk, including, the following principal risks, among others: Management and Strategy Risk, ETF and Mutual Funds Risk, Derivatives Risk, Market Risk, Equity Risk, Fixed Income Securities Risk and Growth-Oriented Investment Strategies Risk. Summary descriptions of these and other principal risks of investing in the Fund are set forth in the Fund's prospectus. Before you decide whether to invest in the Fund, carefully consider these risks associated with investing in the Fund, which may cause investors to lose money. There can be no assurance that the Fund will achieve its investment objective. An investment in the Fund is not a deposit of the bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Please see the Fund's prospectus for additional risk disclosures.

Before investing you should carefully consider the Fund's investment objectives, risks, charges and expenses. This and other information is in the prospectus, a copy of which may be obtained by calling 855-551-5521. Please read the prospectus carefully before you invest.

The index shown is defined as follows: **The S&P 500** Index is the Standard & Poor's Composite Index of 500 stocks and is a widely recognized, unmanaged index of common stock prices. One cannot invest directly in an index.

Morningstar rankings are based on total return and as of 3/31/22 for the Tactical Allocation funds; Class I 3 year 36th percentile out of 239 funds, 5 year 20th percentile out of 200 funds and 10 year 6th percentile out of 98 funds.

The **Morningstar Moderately Aggressive Target Risk Index** family is designed to meet the needs of investors who would like to maintain a target level of equity exposure through a portfolio diversified across equities, bonds and inflation-hedged instruments. The Morningstar Moderately Aggressive Target Risk Index seeks approximately 60% global equity exposure.

The **Morningstar Tactical Allocation Category** measures the performance of fund portfolios that seek to provide capital appreciation and income by actively shifting allocations across investments. These portfolios have material shifts across equity regions, and bond sectors on a frequent basis. To qualify

for the tactical allocation category, the fund must have minimum exposures of 10% in bonds and 20% in equity. Next, the fund must historically demonstrate material shifts in sector or regional allocations either through a gradual shift over three years or through a series of material shifts on a quarterly basis. Within a three-year period, typically the average quarterly changes between equity regions and bond sectors exceeds 15% or the difference between the maximum and minimum exposure to a single equity region or bond sector exceeds 50%.

The information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed; and (3) is not warranted to be accurate, complete, or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. Past performance is no guarantee of future results. The Morningstar Rating for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed end funds, and separate accounts) with at least a three-year history. Exchange traded funds and open ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10 year (if applicable) Morningstar Rating metrics. The weights are 100% three-year rating for 36-59 months of total returns, 60% five year rating/40%three-year rating for 60-119 months of total returns, and 50% 10 year rating/30%five-year rating/20%three year rating for 120 or more months of total returns. While the 10 year overall rating formula seems to give the most weight to the 10 year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.
