#### **CURRENT PORTFOLIO POSITIONING**

The North Square Tactical Growth Fund started the month of June with 69.5% invested in equities and 30.5% in money market securities. During the month we added positions in U.S. small capitalization equities and long-term U.S. treasuries. Our U.S. equity positions are highly diversified across growth and value and from small cap to large cap. Our international position is in a large growth Eurozone ETF. Our total equity exposure of approximately 75.0% is equal to our long-term average of the last 20 years. Our cash position is now at 20.0%. The volatility of April is fading in our proprietary investment model, and we believe we are beginning to see more opportunities in various markets.

Principal Risks of Investing: Risk is inherent in all investing including an investment in the Fund. An investment in the Fund involves risk, including, the following principal risks, among others: Management and Strategy Risk, ETF and Mutual Funds Risk, Market Risk, Sector Focus Risk, Equity Risk, Growth-Oriented Investment Strategies Risk, Commodity Risk, Currency Risk, Foreign Investment Risk, Fixed Income Securities Risk, Interest Rate Risk, Credit Risk, Liquidity Risk, High Yield ("Junk") Bond Risk, Large-Cap Company Risk, Small Cap and Mid Cap Company Risk, and Government Sponsored Entities Risk. Summary descriptions of these and other principal risks of investing in the Fund are set forth in the Fund's prospectus. Before you decide whether to invest in the Fund, carefully consider these risks associated with investing in the Fund, which may cause investors to lose money. There can be no assurance that the Fund will achieve its investment objective. An investment in the Fund is not a deposit of the bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Before investing you should carefully consider the Fund's investment objectives, risks, charges and expenses. The Sharpe Ratio was developed by Nobel laureate William F. Sharpe and is used to help investors understand the return of an investment compared to its risk. The ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk.

Correlation is a measure of how investments move in relation to one another. A correlation of 1 means the two asset classes move exactly in line with each other, while a correlation of -1 means they move in the exact opposite direction. A correlation of zero means that the returns are completely uncorrelated, or a "non-correlated" asset.
