CURRENT PORTFOLIO POSITIONING

The North Square Tactical Growth Fund made one change to its portfolio in September. We sold our India ETF, increasing our cash position and brought our international holdings total to 19.9% of the Fund. Our domestic equity holdings represent 64.7% of the Fund. Our international holdings are overweight small caps and have concentrated

exposure to Canada, Europe, and real estate. Our domestic equity remains diversified amongst large growth, value, and financials. Our position in a gold mining ETF has grown steadily through price appreciation. Our fixed income totals 3.9% while cash has moved up to 6.2% of the Fund.

Principal Risks of Investing: Risk is inherent in all investing including an investment in the Fund. An investment in the Fund involves risk, including, the following principal risks, among others: Management and Strategy Risk, Investment Companies Risk, Market Risk, Sector Focus Risk, Equity Risk, Growth-Oriented Investment Strategies Risk, Commodity Risk, Currency Risk, Foreign Investment Risk, Fixed Income Securities Risk, Interest Rate Risk, Credit Risk, Liquidity Risk, High Yield ("Junk") Bond Risk, Large-Cap Company Risk, Small Cap and Mid Cap Company Risk, and U.S. Government Securities Risk. Summary descriptions of these and other principal risks of investing in the Fund are set forth in the Fund's prospectus. Before you decide whether to invest in the Fund, carefully consider these risks associated with investing in the Fund, which may cause investors to lose money. There can be no assurance that the Fund will achieve its investment objective. An investment in the Fund is not a deposit of the bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Before investing you should carefully consider the Fund's investment objectives, risks, charges and expenses. This and other information are in the prospectus, a copy of which may be obtained by calling 855-551-5521 or visiting northsquareinvest.com. Please read the prospectus carefully before you invest.

Beta is a measure of systematic risk, or the sensitivity of a manager to move-

ments in the benchmark. A beta of 1 implies that you can expect the movement of a manager's return series to match that of the benchmark used to measure beta.

The Sharpe Ratio was developed by Nobel laureate William F. Sharpe and is used to help investors understand the return of an investment compared to its risk. The ratio is the average return earned in excess of the risk-free rate per unit of volatility or total risk.

Correlation is a measure of how investments move in relation to one another. A correlation of 1 means the two asset classes move exactly in line with each other, while a correlation of -1 means they move in the exact opposite direction. A correlation of zero means that the returns are completely uncorrelated, or a "non-correlated" asset.

A Yield Curve is a line that plots the yields or interest rates of bonds that have equal credit quality but different maturity dates. The slope of the yield curve is commonly thought to potentially predict the direction of interest rates and the subsequent economic expansion or contraction that may result.
