

NORTH SQUARE

Dynamic Small Cap Fund

TICKER Class I: ORSIX Class A: ORSAX

AS OF DECEMBER 31, 2024

AVERAGE ANNUAL TOTAL RETURNS (%) AS OF MOST RECENT CALENDAR QUARTER 12/31/24

	QTD	YTD	1 Year	3 Years	5 Years	10 Years	Since Inception ¹
Class I	-0.92	14.89	14.89	6.56	12.30	11.12	13.47
Class A (Load)	-6.64	8.11	8.11	—	—	—	18.61
Class A (No-Load)	-0.93	14.68	14.68	—	—	—	22.92
Russell 2000 TR Index	0.33	11.54	11.54	1.24	7.40	7.82	10.72

Class A shares maximum sales charge (load) imposed on purchases is 5.75%.

¹Class I shares inception date is 11/1/2008; Class A shares inception date is 5/1/2023. Benchmark since inception return corresponds to Class I shares inception date. The Fund has adopted the historical performance of the Oak Ridge Dynamic Small Cap Fund as a result of a reorganization on May 10, 2019. At the time of the reorganization, the Fund and the predecessor fund had substantially the same investment strategies. Additionally, the performance information presented for periods prior to September 30, 2015 is also based on a different predecessor fund. The predecessor fund's and the Fund's objectives, policies, guidelines and restrictions are, in all material respects, equivalent to those of the predecessor account. Please see the Fund's prospectus for additional information.

DOWN MONTH PERFORMANCE

ORSIX outperformed its benchmark in approximately two-thirds of down-market months (27 times). This provided a total outperformance of 14.72%.

Source: Morningstar Direct

Call 855-551-5521 or visit northsquareinvest.com for the most recent month-end performance results. Fund facts are as of 12/31/24 unless otherwise stated. Current performance may be lower or higher than the performance data quoted. The performance data quoted represents past performance, which is no guarantee of future results. Investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Performance results with sales charges reflect the deduction of the maximum front-end sales charge (Load). Performance presented at NAV does not include a sales charge and would be lower if a charge was reflected. Performance would have been lower without expense limitations in effect.

Investment Process

We believe market inefficiencies and mispricings are best exploited through a systematic process

Two sources of mispricings:

Capture mispricings via systematic framework:

- Repeatable, testable investment process drives efficiency, speed and consistency
- Harvest benefits of diversification and breadth
- Leverage modern data science tools and data sets

Investment Process

ALPHA MODEL – CATALYST, QUALITY AND RELATIVE VALUE

Signal Category	Signal Definition	Signal Example
Trending (Catalyst)	Driven by investor sentiment, fundamental momentum and positioning dynamics	<ul style="list-style-type: none"> Investor Sentiment Flow Measures Fundamental Momentum Smart Money Indicators Cross Momentum Cross-Asset Class

Contrarian (Value)	Driven by differences in market pricing in comparison with a stock's intrinsic worth	<ul style="list-style-type: none"> Asset Based Valuation Flow Based Valuation Reversal Investor Anti-Attention Cross-Asset Class Residual Income

Source: Alkert Global

IMPLEMENTATION: PORTFOLIO CONSTRUCTION

Stock forecasts are integrated together with risk model and transaction cost estimates to create portfolio exposures intended to maximize returns relative to risk

- Constrain exposure to systematic factors (ex. industry, country, size, style)
- Integrate proprietary transaction cost estimates generated from 20 years of trading experience
- Attribution feedback loop drives learning and improvement

The expense ratios are as shown in the Fund's most recent prospectus. The difference between gross and net operating expenses reflects contractual fee waivers and/or expense reimbursements in place until September 30, 2029. Please see the Fund's prospectus for more details.

Principal Risks of Investing: Risk is inherent in all investing, including an investment in the Fund. An investment in the Fund involves risk, including the following principal risks, among others: Small Cap Company Risk, Market Risk, Equity Risk, Reliance on Technology Risk, Value-Oriented Investment Strategies Risk, Management and Strategy Risk, Sector Focus Risk, Liquidity Risk, Portfolio Turnover Risk, ETF Risk, Preferred Stock Risk, Foreign Investment Risk, Real Estate Investment Trust ("REIT") Risk, and Initial Public Offering ("IPO") Risk. Summary descriptions of these and other principal risks of investing in the Fund are set forth in the Fund's prospectus. Before you decide whether to invest in the Fund, carefully consider these risk factors and special considerations associated with investing in the Fund, which may cause investors to lose money. There can be no assurance that the Fund will achieve its investment objective. An investment in the Fund is not a deposit of the bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. Please see the Fund's prospectus for additional risk disclosures.

The Morningstar Rating for funds, or "star rating", is calculated monthly for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. The Rating may reflect the waiver of all or a portion of the fund's fees. Without such waiver, the Ratings may have been lower.

Before investing you should carefully consider the Fund's investment objectives, risks, charges and expenses. This and other information is in the prospectus, a copy of which may be obtained by calling 855-551-5521. Please read the prospectus carefully before you invest.

The benchmark shown represents the Fund's performance benchmark, which is different from the Fund's regulatory benchmark. The Fund's regulatory benchmark is the Russell 3000® TR Index, which measures the performance of the 3,000 largest U.S. companies based on total market capitalization, which represents approximately 98% of the investable U.S. equities. The Fund's regulatory benchmark can be found in the Fund's prospectus and/or shareholder report, available online at northsquareinvest.com, where current performance information is also available.

The Russell 2000® Index measures the performance of the small cap segment of the U.S. equity universe. The Russell 2000 Index is a subset of the Russell 3000® Index representing approximately 10% of the total market capitalization of that index. It includes approximately 2000 of the smallest securities based on a combination of their market cap and current index membership. The volatility (beta) of the account may be greater or less than that of the benchmark. It is not possible to invest directly in an index.

Beta is a measure of the volatility of a fund relative to the overall market. A beta less than one indicates lower risk than the market; a beta greater than one indicates higher risk than the market.

Alpha is a measure of the portfolio's risk-adjusted performance. When compared to the portfolio's beta, a positive alpha indicates better-than-expected portfolio performance and a negative alpha worse-than-expected portfolio performance.

Information ratio is a measure of portfolio management's performance against risk and return relative to a benchmark or alternative measure.

The Sharpe ratio measures the excess return per unit of deviation, or risk.

Standard Deviation measures the average deviations of a return series from its mean, and is often used as a measure of risk.

The Tracking error is reported as a "standard deviation percentage" difference – the difference between the return received on an investment and that of the investment's benchmark.

R-squared represents the percentage of the portfolio's movements that can be explained by the general movements of the market. Index portfolios will tend to have R-squared values very close to 100.

Upside capture ratio measures a fund's performance in up markets relative to an index. A value over 100 indicates that a fund has outperformed the benchmark during periods of positive returns for the benchmark.

Downside capture ratio measures a fund's performance in down markets relative to the index.
